TABLE OF CONTENTS

	Page
Foreword	1
Elementary Differential Equations of Fluid Mechanics, Dynamics and Strength of Materials, Dr. Paul F. Chenea	3
Applied Mathematics in the Electric Power Industry, J. E. Freer	9
Design and Construction of Digital Computing Machines, Carl C. Chambers	13
Analogies in Fluid Flow, Elasticity and Soap Films, Dr. G. E. Hay	17
On the Importance of Anchorage in the Applications of Mathematics to Industry, Richard S. Burington	26
The Logic of Programming Electronic Digital Computers, A. W. Burks	36
Analogue Computation, Arvid W. Jacobson	53
Fluid Flow Mappers, (Abstract), A. D. Moore	64
Location Estimator for Non-Gaussian Distribution, D. R. Elliott	65
The Differential Equations of Structures, Clayton J. Pajot	71
The Thermal Design of Evaporative Condensers, (Abstract), Hugh J. Scullen	91
Regular Meetings	92
Officers and Members of Committees 1949-1950	93
Study Groups	95
Suggestions to Authors	96
